Bhopal, Madhya Pradesh, India

SUMMARY

Results-driven Data Analyst with hands-on experience across the full analytics pipeline — ETL, relational database design, Python statistical analysis, machine learning, and Power BI dashboarding. Proficient in Python, SQL, Power BI, and Pentaho with a proven ability to translate raw data into actionable business insights through hypothesis testing, predictive modeling, and interactive reporting. Seeking Data Analyst or Business Analyst roles where data can drive measurable impact.

TECHNICAL SKILLS

Programming: Python, SQL

Data Analytics: Pandas, NumPy, Scikit-learn, EDA, Hypothesis Testing (T-Test, Chi-Square), Logistic Regression

Visualization: Power BI (DAX, Data Modeling), Matplotlib, Seaborn

Databases & ETL: SQL Server, MySQL, Pentaho Data Integration, Joins, CTEs, Window Functions, Stored Procedures, Views

Cloud & Tools: Microsoft Azure, Excel, Jupyter Notebook, Git, GitHub

EXPERIENCE

Data Analyst Intern — Cybrom Technologies

May 2026 – July 2026

- Cleaned, transformed, and validated raw datasets using Python and SQL, improving data quality and readiness for downstream analysis and reporting.
- Developed complex SQL queries using JOINS, CTEs, aggregate functions, and window functions to extract business insights and optimize reporting workflows.
- Performed exploratory data analysis and feature engineering in Python (Pandas) and created visualizations in Matplotlib and Seaborn to support stakeholder decision-making.
- Applied Scikit-learn machine learning techniques for anomaly detection and built interactive Power BI dashboards to communicate findings to non-technical stakeholders.

PROJECTS

Banking Customer Churn Analytics — End-to-End Data Pipeline

- Engineered a complete 6-step ETL pipeline in Pentaho Data Integration on a 5,000-record banking dataset, resolving missing values across 7 columns and eliminating duplicates to achieve 100% data integrity for downstream analysis.
- Designed a normalized 3-table relational schema in SQL Server and authored 70+ queries — including multi-table JOINS, CTEs, window functions, and 6 stored procedures — to surface churn drivers across customer segments.
- Conducted T-Test and Chi-Square hypothesis testing in Python on 4,250 records, identifying loan rejection as a 61.3% churn driver and statistically proving financial behavior outweighs income as a predictor of churn ($p > 0.05$ for income).
- Built a Logistic Regression churn-prediction model in Scikit-learn and delivered a 4-page interactive Power BI dashboard with 12 DAX measures and synced slicers, enabling the bank to flag and act on 341 high-risk customers.

Tech Stack: Pentaho ETL, SQL Server, Python (Pandas, SciPy, Scikit-learn), Power BI, DAX

SQL Customer Analytics & Food Delivery Insights Project

- Built and optimized 10+ advanced SQL queries on a food delivery dataset to extract KPIs including customer acquisition, retention, and outlet performance, improving analytical decision-making speed by 40%.
- Designed window function and CTE-based analytics to identify top-performing restaurants and daily acquisition trends, uncovering a 44% organic acquisition rate that informed marketing strategy.
- Developed customer segmentation logic to identify high-value and churn-risk users, improving campaign targeting efficiency by 30%.

Tech Stack: SQL Server, MySQL, Window Functions, CTEs, Subqueries, Data Analysis

EDUCATION

Bachelor of Computer Applications (BCA)

B.S.S.S., Bhopal — CGPA: 9.45 / 10 (2nd Year)

Jul 2024 – Jul 2027

Class 12th, CBSE

Carmel Convent Sr. Sec. School — 86%

Jul 2023 – Jul 2024

CERTIFICATIONS

- Data Analytics Using Python — NPTEL, IIT Roorkee (Elite Certificate)
- Python for Data Science — NPTEL (Elite + Silver)
- Programming in Java — NPTEL (Elite + Gold, 100/100)
